

Welcome to the Flemingsberg network for cell- and gene therapies!

We recently received CIMED (Centre for Innovative Medicine) funding to set up a network for Advanced Therapy Medicinal Products (ATMPs) in Flemingsberg. Our purpose is to connect available resources with researchers and clinicians, to share our collected knowledge and experience, with the aim of facilitating clinical translation and research. Let's help each other bring more innovative cell- and gene therapies to patients!

Our hope is that this network will assist in spreading information that will make the process of ATMP development from research to patient delivery more effective and to also act as a forum for discussion and assistance in development of practical solutions.

This is an invitation to our first meeting, in which we will inform you of ongoing activities and available resources and discuss your needs and perspectives. What can you bring to the network and what do you need from the network?

We look forward to meeting you on **June 3**. Lunch will be served at 11.30 and the meeting will start 12.00 and end 13.00. The meeting will be held at ANA futura (new KI facilities at Alfred Nobels Allé 8), room will be announced to participants.

We hope you are interested in developing this network with us into something that is useful and informative for all involved, anyone interested is welcome!

RSVP to kcc.karolinska@sl.se

Kristina Kannisto, Lilian Walther Jallow and Heather Main.
